

Limerick City and County Council.

Limerick Way Finding and Signage Project
Archaeological Recommendations.

August 2023.

Part 8 Archaeological Report

Limerick Wayfinding & Orientation Signage Project

Background: Limerick City and County Council commissioned the design of wayfinding signage from Place Marque +, based on the current branding and the designation of the city into a series of quarters. The purpose is to enhance the visitor experience and improve visual accessibility in the city.

Description of works: The Way Finding Strategy incorporates a range of 3 different sign types consisting of i) double sided map monoliths (ST3) which are 2.4m in height; ii) finger posts (ST4) which are 3.65m in height and iii) urban marker posts (ST5) which are 1.1m in height. The final structural design will be carried out by the manufacturer but the foundations for even the largest signs will not exceed 1m x 1m x 1.5m.

Previous appraisal: An Archaeological and Architectural Heritage Impact Assessment 2021 was carried out by AMS Ltd for Phase 1 of this project which, while it concentrated on the works in O'Connell Street, carried out a scoping exercise of the receiving environment for the entire project. At the time of the report (2020) locations were simply indicated on the mapping without any ground proofing.

Extract from AMS report:

'The methodology for the first component comprised a high-level desk-based survey to identify all recorded archaeological and architectural heritage sites within a defined study area that encompasses the proposed locations for all wayfinding markers. This component also included a review of other information that can provide an indication of the archaeological potential (or likelihood of previously unrecorded subsurface archaeological remains to be extant) within the proposed development area.'

The report included this information in three Appendices:

Appendix 1: Recorded Archaeological Sites within the Overall Study Area

Appendix 2: Previous Archaeological Investigations within the Overall Study Area

Appendix 3: Recorded Architectural Heritage Sites within the Overall Study Area

The recommendation of the 2021 AMS report was that archaeological monitoring should be in place for the installation.

Current Archaeological Appraisal: As part of the preparation for the Part 8 application, the locations for the signs have been, for the most part, tied down within a small area which allows for a proposed location containing a hierarchy of preferences. Further ground proofing in areas of multiple services has been carried out with site investigations using ground penetrating radar, to establish areas suitable for the installation of the new signage.

Using the more detailed design and layout, the project was re-assessed in relation to its archaeological impact. Each location was individually assessed in relation to its known or potential archaeological remains. Out of the total of 70 proposed signs, 33 of them are located within the zone of archaeological potential for the Recorded Monument (LI005:017) classified as the historic town of Limerick. Specifically, 3 are located at the west of Thomond Bridge, 15 are located within Englishtown, 8 are located within Irishtown and the remaining 7, while within the zone of notification, are actually outside the walls of the medieval city. Within the walled city the signs are also located close to individual monuments or earlier archaeological excavations included on the Sites & Monuments Record (see table below and Appendices 1-3 from AMS Report).

Potential Impact: The signs are to be located through the archaeologically sensitive medieval core of the city, incorporating Englishtown & Irishtown (see attached Table) and close to a range of Protected Structures in the Georgian Quarter (see AMS Ltd Appendices 1-3). To the west of Thomond Bridge 2 of the 3 proposed signs are direct replacements in the same footprint as existing signage. In Englishtown of the 15 signs, 5 are replacements, in Irishtown 2 of the 8 proposed signs are placements, while of the remaining 7 outside the walls of the medieval city 5 are also direct replacements. Given the urban context of the project the receiving environment is heavily altered already and contains other existing perpendicular installations including but not confined to road signs, lighting columns, bollards & bike stands as well as multiple underground services. While there is potential to disturb archaeological material it is likely that most of the foundations pits will already have suffered some degree of disturbance and their small size will also confine any potential impact. One or two of the signs are located close to the line of the City Defences, none of the signs will be located on the projected line of the defences, nor will they visually impact any upstanding part of the defences.

Mitigation: Given the small scale of each of the foundation pits it is considered that licensed archaeological monitoring would be the most effective mitigation of any potential effects. The archaeologist shall be present during all ground disturbance with the power to halt works should archaeological material be revealed. Following consultation with the Planning Authority & the Licensing Authority any archaeological material found during the course of the works can then either be preserved in situ or preserved by record.

The archaeologist shall be appointed for the duration of the construction contract and shall be supported and shall be provided with satisfactory arrangements for the recording and excavation of any archaeological material that may be considered appropriate to excavate. The contracted archaeologist shall prepare and submit a method statement to accompany the licence application which shall be approved by the National Monuments Service (Licensing Authority). The licence shall be in place before the construction commences. The archaeologist shall monitor all ground disturbance associated with the development. This shall include any separate arrangements arising from the contract formed by the successful contractor which might lie outside the work zones indicated on the Part 8 Planning such as site compound etc. All of these private arrangements shall be assessed in advance by the contracted archaeologist and archaeological mitigation agreed by the relevant bodies.

On completion of the ground works a report detailing the results of the licensed archaeological monitoring works shall be submitted to the Department of Housing, Local Government & Heritage and the Planning Authority. Should an archaeological excavation be required then within twelve months of the completion of the excavation a final report (in the format recommended in the Guidelines for Authors of Reports on Archaeological Excavations 2006 National Monuments Service) shall be submitted to the Planning Authority

Sarah McCutcheon

Local Authority Archaeologist
